Blinkit Business Insights Report

Product performance, outlet operations, sales trends and customer satisfaction | Source: Blinkit Grocery dataset (8,523 sales records, 16 item types, 10 outlets, 3 city tiers)

1.20M	120.2K	3.97	10.98	5.7 yrs
Total Sales	Avg Sales / Outlet	Avg Rating (CSAT)	Sales per Kg	Avg Years of Operation*

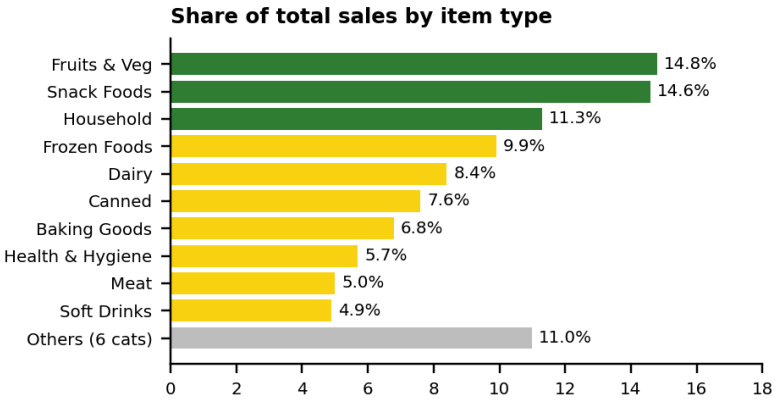

1. Executive Summary

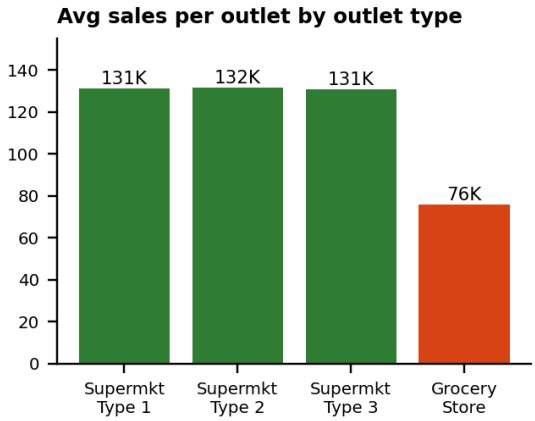

Blinkit generated **1.20M in total sales** across 10 outlets with a healthy average rating of **3.97 / 5**. Sales are driven by a few large categories and by **outlet format**, not by city tier, outlet age, fat content or item visibility. The biggest levers for growth are (1) the underperforming Grocery Store format, (2) the polarised low ratings in a small share of orders, and (3) a visibility strategy that currently does not translate into sales.

2. Key Findings (Management Questions)

Q1. Which product categories contribute most to overall sales?

Fruits and Vegetables (14.8%) and **Snack Foods (14.6%)** lead, followed by Household (11.3%) and Frozen Foods (9.9%). The top 4 categories deliver about 51% of sales and the top 6 about 67%. Seafood (0.8%) and Breakfast (1.3%) are the smallest. Household has the highest average sale value per item (149.4).

Q2. How does fat content influence sales?

Low Fat items account for 64.6% of sales (776K) versus 35.4% for Regular (425K). This is a volume effect: Low Fat has 5,517 sales records against 3,006 for Regular, while the average sale value (140.7 vs 141.5) and rating (3.97 vs 3.97) are practically identical. Customers buy low fat items more often, but they do not spend more on them.

Q3. Which outlets (by size, type, or tier) perform best?

- **Type:** Supermarket Type 1 contributes 65.5% of sales, but only because it has 6 outlets. Per outlet, Type 1, 2 and 3 perform alike (about 131K each), while **Grocery Stores average only 76K, roughly 42% less**.
- **Tier:** Tier 3 has the highest total (472K, 39.3%), but it has 4 outlets versus 3 in other tiers. Per outlet, **Tier 2 leads (131K)**, then Tier 3 (118K) and Tier 1 (112K).
- **Size:** Medium outlets lead (42.3% of sales), then Small (37.0%) and High (20.7%). Top single outlets are OUT035 (Tier 2), OUT046 (Tier 1) and OUT013 (Tier 3), all around 132-133K.

Q4. What is the sales trend across establishment years?

There is **no growth pattern linked to outlet age**. Every supermarket outlet, from the 2012 store to the 2022 store, sells about 129-133K. The newest outlet (OUT018, 2022) performs as well as the oldest supermarket (OUT049, 2012), which suggests a fast ramp-up for new supermarkets. 2018 appears highest (204.5K) only because two outlets opened that year, and the two Grocery Stores (2011, 2018) are the weakest at 78K and 74K.

Q5. Which items have high visibility but low sales?

The correlation between item visibility and sales is **effectively zero (-0.001)**. Sales are nearly the same across all visibility quartiles (about 137-147 per sale), so extra shelf or app visibility is not lifting sales. **Baking Goods** is the clearest underperformer: above-average visibility (6.9% vs 6.6% overall) yet the lowest average sale value (126.4). **Breakfast** and **Seafood** receive the highest visibility of all categories (8.6% and 7.5%) but remain the smallest by sales. In contrast, Household has below-average visibility (6.1%) and the highest average sale value (149.4).

Q6. Top 10 items by sales and rating

#	Item ID	Item Type	Sales	Avg Rating
1	FDU12	Baking Goods	2,371	4.14
2	FDT07	Fruits and Vegetables	2,307	4.00
3	NCQ06	Household	2,295	4.12
4	FDL58	Snack Foods	2,112	3.86
5	NCB31	Household	2,105	3.84
6	FDX31	Fruits and Vegetables	2,104	4.06
7	FDF05	Frozen Foods	2,103	3.90
8	FDR59	Breads	2,097	3.79
9	FDP28	Frozen Foods	2,088	4.21
10	FDA04	Frozen Foods	2,072	4.15

The top 10 items sell 2,072-2,371 each. **FDP28, FDA04, FDU12 and NCQ06** combine high sales with ratings of 4.1 or above. **FDR59 (Breads, 3.79) and NCB31 (Household, 3.84)** sell well but have below-average satisfaction and need quality checks. Three of the top 10 are Frozen Foods.

Q7. How does customer satisfaction vary?

Satisfaction is **stable across the business**: 3.88 to 4.02 by category, 3.95 to 3.99 by outlet type and 3.96 to 3.98 by tier. **Meat (4.02)**, Household (4.00) and Canned (3.99) rate highest; **Breads (3.88)**, Hard Drinks (3.91) and Starchy Foods and Soft Drinks (3.92) rate lowest. Grocery Stores rate slightly higher (3.99) despite lower sales, and Tier 1 is marginally highest (3.98). The average hides a split: 427 records are rated 5.0 but **114 are rated 1.0**, and about 5% of records (424) are rated below 3.0, so a small group of poor experiences is pulling the average down.

3. Recommendations

- **Fix or repurpose Grocery Stores.** Per-outlet sales are 42% below supermarkets. Review range, size and location for OUT010 and OUT019, or convert them to a supermarket format.
- **Back Tier 2 and replicate winning outlets.** Tier 2 leads per outlet (131K). Use OUT035, OUT046 and OUT013 as templates for new store openings, and expect new supermarkets to reach full sales quickly.
- **Protect and grow the core categories.** Keep availability high for Fruits and Vegetables, Snack Foods, Household and Frozen Foods (about 51% of sales) and cross-sell them with Dairy and Canned.
- **Rethink item visibility.** Visibility shows no link to sales. Reduce placement for Baking Goods, Breakfast and Seafood and test promotions, bundles or pricing instead, using A/B tests.
- **Do not rely on fat-content labels for growth.** Spend per item is identical, so grow the Regular range through promotions and keep Low Fat as the volume driver.
- **Tackle low ratings.** Investigate the 1-star orders, starting with Breads, Hard Drinks, Soft Drinks and top sellers FDR59 and NCB31, to lift CSAT above 4.0.

Notes: Profit Margin % and Sales vs Target are not reported because the dataset has no cost or target data. Figures were calculated from the cleaned model tables. *Years of Operation uses 2022 as the reference year (latest establishment year in the data) and averages the 10 outlets. Currency units are as given in the dataset. Fat content labels (LF, low fat, reg) were standardised to Low Fat and Regular. Missing Item Weight (1,463 records) is excluded from Sales per Kg.
